

## Switch to the latest DTCO® 4.0e generation!

www.fleet.vdo.com

# A big step forward: upgrade your smart tachograph now.

**With the software upgrade, your commercial vehicle fleet will save time and money.**

The DTCO® 4.0e automatically recognises the country in which the vehicle is located when crossing national borders.

Reduced infringements with the new configurable warning messages in accordance with Directive 2002/15/EC on the organisation of working time.

The new DTCO® working time counter also records work periods (daily/weekly working hours and break periods), for a clear overview of working and driving times.

More time for manual entries - time limit increased to 10 minutes.

### VDO Counter with working and break time counter

In addition to the VDO Counter, which determines the driving times, the update also has a working time counter.

1. Continuous current working time (the sum of driving time and working time since the last break)
2. Daily working time (total working time of the current shift)
3. Cumulative break time (the sum of all breaks since the start of the shift)
4. Current weekly working time (sum of working time for the current calendar week)
